Laboratory
glassware —
Specification for
straight-bore glass
stopcocks for general
purposes

 $ICS\ 71.040.20$

National foreword

The UK participation in the preparation of this British Standard was entrusted by Technical Committee LBI/36, Laboratory glassware and related apparatus, to Subcommittee LBI/36/2, General laboratory glass and plastics ware. It is identical with ISO 4785:1997 Laboratory glassware — Straight bore glass stopcocks for general purposes published by the International Organization for Standardization (ISO). It supersedes BS 1751:1985 which is withdrawn.

A list of organizations represented on this subcommittee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the BSI Standards Catalogue under the section entitled "International Standards Correspondence Index", or using the "Find" facility of the BSI Standards Electronic Catalogue.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, the ISO title page, pages ii to iv, pages 1 to 4, an inside back cover and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

This British Standard, having been prepared under the direction of the Sector Board for Materials and Chemicals, was published under the authority of the Standards Board and comes into effect on 15 August 1997

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

This International Standard ISO 4785 has been prepared by Technical Committee ISO/TC 48, *Laboratory glassware and related apparatus*, Subcommittee SC 2, *General laboratory glassware (other than measuring apparatus)*.

Annex A of this International Standard is for information only.

iv blank

1 Scope

This International Standard specifies requirements and dimensions for two series of glass straight-bore stopcocks for general-purpose use. The stopcocks are defined by their nominal (bore) diameter and large end diameter and length of the ground zone. It is recommended that, in national standards, only one of the series should be specified.

NOTE Annex A lists additional International Standards for other general-purpose laboratory glassware.

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this International Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 719:1985, Glass — Hydrolytic resistance of glass grains at 98 $^{\circ}$ C — Method of test and classification.

ISO 3585:1991, Borosilicate glass 3.3 — Properties. ISO 4803:1978, Laboratory glassware — Borosilicate glass tubing.

3 Ground zone

3.1 The taper of the ground zone shall be such as to give one increment on the diameter for ten increments on the axial length, with a tolerance of \pm 0,006 on the diameter increment i.e. a taper of $(1 \pm 0,006)/10$.

NOTE 1 This tolerance is in agreement with the relevant requirement of ISO 383. Annex B in ISO 383:1976 describes a leakage test with air which may be used to check the tightness of the ground zone.

NOTE 2 Actual manufacturing techniques normally result in a tighter tolerance than that given above, but owing to the lack of experimental evidence it is not yet possible to reduce the specified value.

3.2 The centreline average height of the ground surface shall not exceed 1 μm and should preferably be less than 0.5 μm .

NOTE The "centreline average height" of the ground surface is the average value $R_{\rm a}$ of the surface roughness as defined in ISO 468.

4 Dimensions and series of sizes

4.1 The nominal diameters of series I stopcocks shall be as follows (given in millimetres):

$$1 - 1,5 - 2,5 - 4 - 6 - 10$$

NOTE This is the R 5 series of preferred numbers.

4.2 The nominal diameters of series II stopcocks shall be as follows (given in millimetres):

$$1 - 1, 5 - 2 - 3 - 4 - 5 - 6 - 8 - 10$$

- **4.3** The dimensions and tolerances of the ground zone shall be as shown in Table 1 and Figure 1.
- **4.4** The allocation of bore diameters to key and barrel dimensions shall be as shown in Table 2.

5 Side arms

The side arms shall be fused to the barrel so as to enable a pin of thickness 0,8 times the nominal bore to fit at least to the middle of the length of the bore. See Figure 2 for details.

Recommended dimensions for the side arms are given in Table 3. In the case of stopcocks made from borosilicate glass 3.3, tubes in accordance with ISO 4803 should be used.

6 Material

6.1 Stopcocks should preferably be made from borosilicate glass 3.3 in accordance with ISO 3585. When tested according to the procedure and classification given in ISO 719, the glass shall comply with the requirements of class HGB3 or better.

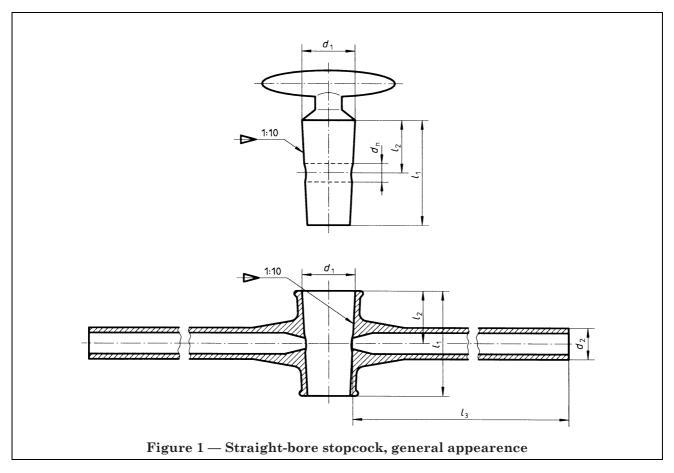

The glass should be as free as possible from visible defects and reasonably free from internal stress which would impair the performance of the stopcock.

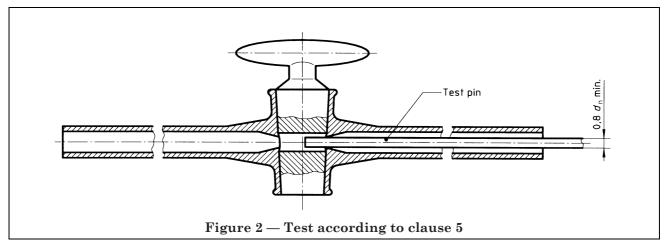

6.2 Both the key and barrel of a stopcock should preferably be fabricated from the same type of glass.

7 Construction

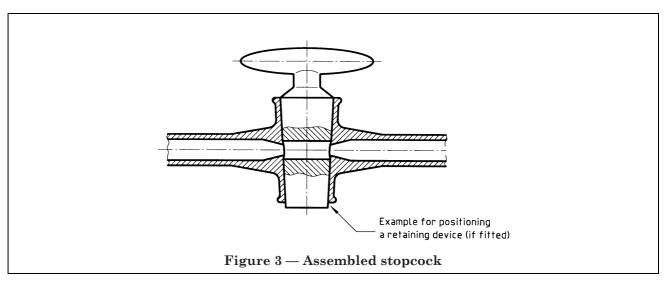

The key may be solid or hollow at the manufacturer's discretion. The key may project slightly beyond the base of the ground zone and can be fitted with a suitable retaining device (see Figure 3).

The rims of the barrel should be suitably strengthened, in order to avoid chipping. The construction should be sufficiently robust to withstand normal usage.

 \odot BSI 09-1999

8 Dimensions

The dimensions shall be as given in Table 1 to Table 3.

9 Designation

For convenience of reference to stopcocks complying with the requirements of this International Standard, the use of a designation is recommended, consisting of the following dimensions, expressed in millimetres:

- nominal bore diameter (e.g. 4), and
- large end diameter of the ground zone (e.g. 18,8), and
- the number of this International Standard.

EXAMPLE: Stopcock ISO 4785, 4-18,8

10 Marking

The size of the large end diameter of the ground zone according to Table 2 shall be marked on the barrel of each stopcock in such a way as to be permanent under normal conditions of use:

EXAMPLE: 18,8

Table 1 — Dimensions and tolerances of the ground zone

Dimensions in millimetres

I_1^{b}	I_2
22	$11 \pm 0,215$
20	$10 \pm 0,215$
25	$12,5 \pm 0,215$
28	14 ± 0.215

BSI — British Standards Institution

BSI is the independent national body responsible for preparing British Standards. It presents the UK view on standards in Europe and at the international level. It is incorporated by Royal Charter.

Revisions

British Standards are updated by amendment or revision. Users of British Standards should make sure that they possess the latest amendments or editions.

It is the constant aim of BSI to improve the quality of our products and services. We would be grateful if anyone finding an inaccuracy or ambiguity while using this British Standard would inform the Secretary of the technical committee responsible, the identity of which can be found on the inside front cover. Tel: 020 8996 9000. Fax: 020 8996 7400.

BSI offers members an individual updating service called PLUS which ensures that subscribers automatically receive the latest editions of standards.

Buying standards

Orders for all BSI, international and foreign standards publications should be addressed to Customer Services. Tel: 020 8996 9001. Fax: 020 8996 7001.

In response to orders for international standards, it is BSI policy to supply the BSI implementation of those that have been published as British Standards, unless otherwise requested.

Information on standards

BSI provides a wide range of information on national, European and international standards through its Library and its Technical Help to Exporters Service. Various BSI electronic information services are also available which give details on all its products and services. Contact the Information Centre. Tel: 020 8996 7111. Fax: 020 8996 7048.

Subscribing members of BSI are kept up to date with standards developments and receive substantial discounts on the purchase price of standards. For details of these and other benefits contact Membership Administration. Tel: 020 8996 7002. Fax: 020 8996 7001.

Copyright

Copyright subsists in all BSI publications. BSI also holds the copyright, in the UK, of the publications of the international standardization bodies. Except as permitted under the Copyright, Designs and Patents Act 1988 no extract may be reproduced, stored in a retrieval system or transmitted in any form or by any means – electronic, photocopying, recording or otherwise – without prior written permission from BSI.

This does not preclude the free use, in the course of implementing the standard, of necessary details such as symbols, and size, type or grade designations. If these details are to be used for any other purpose than implementation then the prior written permission of BSI must be obtained.

If permission is granted, the terms may include royalty payments or a licensing agreement. Details and advice can be obtained from the Copyright Manager. Tel: 020 8996 7070.
